

# The Implant is Restored, Now What?

## A Team Approach to Implant Maintenance

In Association with **Dr. Tina Beck & Southern California**  
**Periodontics and Implantology**

**Friday, September 29, 2017**

### PROGRAM DESCRIPTION

Dental implants are now the standard of care for patients with missing teeth. As the number of cases increases, it is essential to communicate ideal dental care following implant placement. The dental hygienist is often recognized by the patient as a trusted mentor and a go-to advisor once a patient faces treatment options. This course emphasizes the hygienist's role in pre-, intra- and post-treatment to minimize infection and potential complications.

Evidence-based decision making including safety and efficacy of instruments used in maintenance will be discussed. This presentation will review current literature on instrumentation as well as biocompatibility of materials on titanium and zirconia surfaces.

### LEARNING OBJECTIVES

- Identify basics of implant types and components
- Understand biocompatibility of materials related to implant maintenance
- Understand the current literature on proper instrumentation and maintenance
- Develop decision tree to evaluate health and disease around dental implants
